Workflows in Go High Level & Automated WhatsApp Message

**What the *?@!
are AI Agents?**

Understanding AI Agents

- Agents act like **mini-workers**, carrying out tasks on your behalf
 - They Observe, Plan, and Act (semi-) autonomously to complete objectives
 - Triggered by rules, environmental cues, or scheduled timings
 - Use Large Language Models (LLMs) to make decisions independently
 - Take purposeful actions to achieve defined goals
- “**Orchestration agents**” can manage and coordinate **multiple task-specific agents**
- “**Super-agents**” like OpenAI Operator, Manus, Sparkgen and Claude MCP can **interact with your desktop or browse the web** — even completing purchases on your behalf

How can you automate creating & posting a list of content ideas to LinkedIn/Meta

The C-10 AI Adoption Framework

C1

Challenges

Foundational Resources – Gaps & requirements

Discovery Audit:

Determine current situation, identify repetitive, time- or money-wasting tasks, speak to all teams and prioritise Challenges

Leadership & Strategy:

Establish clear AI goals aligned with business outcomes

Skills & Training:

Upskill teams – training needs & relevant courses

Change Management:

Drive cultural adoption through leadership buy-in and training

Data & Tech Stack:

Ensure clean, accessible data for AI-driven insights

Identify Opportunities & Solutions (where to invest in AI projects)

Top Use Cases for eCommerce & Marketers

C2: Company (Internal Operations)	<ul style="list-style-type: none">• Stock forecasting and dynamic tracking of margins• Automation of internal emails or notification/processing of orders
C3: Customers (Customer Experience)	<ul style="list-style-type: none">• Assistance with product selection and stock levels, using search functionality and use of chatbots to provide shopping advice• Virtual Try-On and “Product In-situ” Apps
C4: Communications (Customer Interactions)	<ul style="list-style-type: none">• Voice Agents to answer client's questions• On-site chatbots/assistants, or workflow-triggered WhatsApp messages
C5: Creation (Content & Media)	<ul style="list-style-type: none">• Content creation at scale for product descriptions (website and marketplace content)• AI Image and video creation• Automation of content creation e.g. for blog or social posts
C6: Channels (Sales & Marketing)	<ul style="list-style-type: none">• Improved conversion rates using AI powered website analysis and testing• Generative Search Optimisation (GSO) – mentions in Gen AI & Optimisation• Sentiment analysis of reviews and social mentions• CustomGPT’s and AI agents to carry out specific marketing tasks, e.g. automation of social• Media Mix Modelling (MMM) for budget allocation by Channel
C7: Connections (AI-Enabled Integrations)	<ul style="list-style-type: none">• Connected CRM/ecommerce data and Chatbots for personalized customer interactions• Connecting processes via API’s using Zapier, Make, N8N or Relevance etc.
C8: Control (Insights & Analytics)	<ul style="list-style-type: none">• AI-Powered Dashboards: Integrating data from various sources to provide a comprehensive view of ecommerce performance, marketing and customer insights.• Predictive analytics for RFM Analysis (Recency, Frequency, Monetary)

Personal Assistant using Slack chat or voice notes (Built using N8N)

Database Analyst

“What product sold the most last month”

“Have a look at this years catalogue and suggest which products we should stock”

Database Analyst

Sub-workflow

The AI can call this sub-workflow anytime, by using the Records by date tool.

The sub-workflow automatically return the result of the last executed node to the AI.

This node sends a custom HTTP Request to the Google Sheets API.

Filtering by date range in the Google Sheets API is very complicated.

This node solves that problem.

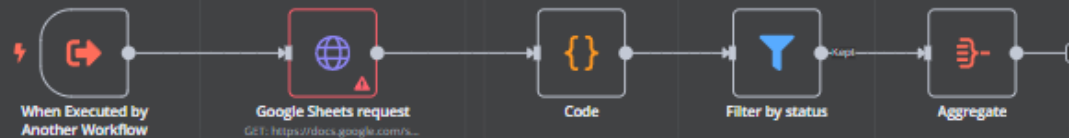

But doing the same in a database is much simpler. A tool could do it without needing a sub-workflow.

The output from this complex request is also messy.

So we use some code generated by ChatGPT to transform the data into JSON objects.

To send all the items back to the AI, we need to finish with everything aggregated into one single item.

Otherwise it will respond with one item at a time, and the AI will only get the first item that arrives.

C9

Costs

Cost considerations & budgets

AI can also be used for price benchmarking & to solve other pricing issues

Cost of your staff, plus any training required

Cost of audits & consultancy (£5-10k)

Cost of AI Adoption & Bespoke Project (£1-50k)

Ongoing maintenance & API costs (£100+ per month)

ROI - Investment vs Cost & Time savings from AI Adoption

Upskill Your Team & Transform Your Business with Generative AI

anicca 

10-Day Training Course in AI and Automation

In today's fast-evolving digital landscape, businesses that embrace Generative AI and AI Agents gain a decisive advantage. **Anicca's 10-Day AI and Automation Course** provides marketers, ecommerce leaders, and business managers with the practical skills, tools, and strategies needed to drive measurable improvements in **productivity, profitability, and customer experience**.

Led by industry experts and packed with hands-on sessions, this course equips you to deploy AI solutions across your organisation — delivering results from day one.

What You'll Learn (Full Timetable Overleaf)

- AI Fundamentals and Practical Marketing Applications.
- Advanced Prompt Engineering and Workflow Design.
- AI Agent Creation for Content, Social Media, SEO, and Customer Service.
- Multimedia Generation (images, video, audio) using AI tools.
- Conversational AI and Customer Journey Automation.
- Ethical AI Practices and ROI Measurement.
- Building Your AI Adoption Roadmap using Anicca's C10 Framework.

Expert-Led, Hands-On Learning

- Taught by industry practitioners with a proven record of AI transformation.
- Small group sessions (limited to 20 in-person participants) for focused, practical learning.
- Hands-on workshops building live AI Agents, supported by real-world case studies and marketing tools.

Ongoing Support

- Access to a private WhatsApp group for tutor and peer-to-peer support, networking, implementation support, and continued learning.

Flexible Learning

- A new course will start every 2-3 months.
- Module 1 is delivered during the first week and can be attended in person at our Leicester training centre (limited to 20 places) or joined live online, with full access to session recordings and resources.
- Following Module 1, you can complete the remaining modules through either FastTrack delivery over the next two weeks or a Standard Pace, with weekly sessions over six weeks.
- Weekend sessions are also available for self-funded learners.

Why Choose This Course?

Gain Practical Skills with Immediate Business Impact

- ✓ Focused on real-world applications and rapid ROI
- ✓ Unlock significant time savings annually through AI-driven content creation, automation, and workflow efficiency
- ✓ Build AI agents and marketing tools ready to deploy across marketing, ecommerce, and lead generation

Book Today

Places are limited – secure your spot today with a £500 + VAT deposit!

Take advantage of a **20% early-bird discount** for the first 10 bookings (available up to 8 weeks before enrolment).

Modules and Timetable

anicca 

Module 1 – Fundamentals

Block of 4 days in-person (Leicester) or live online

Day 1 – AI Marketing Landscape & Practical Applications

This session explores core AI concepts, including how large language models and diffusion models work, key technologies in marketing, and practical applications. Delegates will test various platforms and share their discoveries around surprising AI capabilities.

Day 2 – Prompt Engineering & AI Workflow Design

This session covers the fundamentals of prompt engineering, advanced techniques for optimising outputs, and the use of structured workflows. Delegates will practise building prompt templates, and developing a company prompt library.

Day 3 – Generative AI for Marketing Content

This session explores how to use generative AI for marketing content, covering capabilities, limitations, legal considerations, and quality control. Delegates will practise hands-on content generation, build websites from prompts, and compare outputs across leading AI platforms.

Day 4 – Multimedia Creation with AI

This session covers AI-driven multimedia creation, including text-to-image generation, video and audio technologies, and brand consistency techniques. Delegates will use leading platforms and open-source models to create visuals, generate avatars, and explore legal and ethical considerations.

Module 2 – Building AI Agents and AI Marketing Solutions

Block of 3 days or 1 day per week (live online)

Day 5 – AI Agents & Marketing Automation

This session introduces AI agents and autonomous workflows, covering agent architecture, knowledge bases, and integration with workflow tools. Delegates will build a mini-AI agent using N8N, set up automation triggers, and test and refine their own agent workflows.

Day 6 – AI Agents for Social, Content Creation, SEO, & Landing Pages

This session focuses on building AI agents for content creation, social posting, SEO, and audience analysis, while maintaining brand voice and authenticity. Delegates will design automated content workflows, develop SEO agents, and create AI-driven content calendars.

Day 7 – Digital Advertising & AI & Analytics

This session explores how AI enhances digital advertising and analytics, covering audience targeting, creative optimisation, and budget allocation. Delegates will build AI agents for Google Ads, automate testing, and set up performance tracking and predictive modelling.

Module 3 – Advanced AI Applications and Implementation

Block of 3 days or 1 day per week (live online)

Day 8 – AI Agents & Automation for Productivity & Business Processes

This session focuses on using AI agents to automate productivity and business processes, including diary management, email handling, HR tasks, and document processing. Delegates will build AI assistants, set up automation workflows, and explore ways to balance efficiency with privacy.

Day 9 – Customer Insights & Personalisation, Conversational AI & Customer Engagement

This session explores how AI can drive customer insights, personalisation, and conversational engagement through chatbots and virtual assistants. Delegates will build customer journey maps, create conversation flows, and set up AI-driven customer service and sales enablement tools.

Day 10 – Anicca's C10 AI Adoption Framework

This session introduces Anicca's C10 AI Adoption Framework, guiding organisations through AI readiness assessment, priority setting, and business case development. Delegates will build an AI priority matrix, create an implementation roadmap, and plan for ethical, compliant adoption.
